PROFILE

Second-year Artificial Intelligence and Data Science student with practical experience in full-stack web development, focused on building scalable applications through real-world projects. Developing a strong foundation in frontend, backend, and database concepts while exploring scalable application design.

TECHNICAL SKILLS

Programming: Pandas, OpenCV, Matplotlib, NumPy, IoT-based AI Systems, MATLAB
Backend: Python, Java, Node.js
Frontend: HTML, CSS, JavaScript
Database: SQL
Tools: GitHub

STRENGTHS

- Willingness to learn
- Flexibility
- Continuous improvement mindset

PROJECTS

- GPS-Enabled IoT - Based Air Pollution Monitoring System Designed an IoT - based system using ESP32 and multiple gas sensors such as $C0_2$, $N0_2$, and 0_3 to monitor real - time air quality. Implemented GPS for location-based pollution detection and used machine learning algorithms to detect hotspots

- News Reading Website - Newsspark News - A multi-page news platform where users can read full articles from short feeds, send queries, and enjoy a fully responsive design. Built using HTML, CSS, JavaScript, and Bootstrap for cross - device accessibility

- Developed an animated solar system model using CSS keyframe animations to simulate planetary orbits. Implemented interactive hover effects and structured layout with dynamic content display

- Behavior Monitor - Mental Health Analysis App Built a Flutter - based application for tracking daily behavior and analyzing mental health using time-series modeling. Applied DMD and eigenvalue - based analysis to identify stability patterns and provide early risk detection with actionable insights

ACHIEVEMENTS

- Shortlisted and participated in Speedathon in Chennai Institute of Technology
- Creation of new AI chatbot involves the integration of more than 15 large language models into a single unified system

CERTIFICATIONS

- Completion of Generative AI Mastermind (Outskill)
- Completion of Building & Deploying Apps with Google AI Studio & Multilingual AI Speech App with Vibe Coding
- Completion of Data Analytics Task on Employee Compensation Equality, involving data analysis, classification modeling, and insight generation using Excel
- Completion of HTML, CSS course (GUVI-HCL)

EDUCATION

B.Tech - Artificial Intelligence and Data Science 2024-2028
Amrita Vishwa Vidyapeetham CGPA: 9.32

Higher Secondary 2023- 2024
Lotus Matric Hr. Sec. School 84.67%

Secondary School 2021- 2022
Lotus Matric Hr. Sec. School 94.60%

EXPERIENCE

- Alfido Tech - Machine Learning Intern 1st Dec 25 - 30th Dec 25 worked on 'Iris Classification' using machine learning algorithms in Python. Gained hands-on experience in classification techniques, model evaluation, and ML workflow
- Completed AI Tools Workshop gained practical experience in applying AI tools for real - world use cases
- Participated in AI Agent Frameworks Workshop at Anokha Techfest 2026 gained knowledge in AI agents, frameworks, and real-world applications
- GitHub Repository Analyzer | Hackathon Project: Developed a web-based tool to analyze GitHub repositories and generate concise summaries by identifying important files, project structure, file relationships, and entry points. Built a functional prototype within limited time, demonstrating strong problem-solving and rapid development skills
